All 
Conventional
Homes are now
OBSOLETE

If your new SunSmartPV home has a tile roof, the PV panels will be flush mounted like the photo above.

Whether flush or rack mounted, the sensitive photo voltaic cells are protected by a tough polycarbonate covering strong enough to stand on.

If your new SunSmartPV home has a shingle roof, your PV panels will be mounted in racks attached to your roof.

Tax Credit Story

With your investment in a LifeStyle SunSmart PV home, you will qualify for a \$12,000 direct credit on your Federal Income Taxes based on your purchase of the photo voltaic system*. You will also get about \$2,000 off your Federal Income Taxes reflecting your investment in the solar hot water system included in your SunSmartPV home.

Incredible Opportunity

Check with us to be sure, but with these tax credits, you might be able to purchase a LifeStyle SunSmartPV home with no net down payment, and maybe even get some CASH BACK!

**Be sure to check with your financial advisor*

Everything included in a LifeStyle SunSmart Home PLUS FREE Electricity from the Power of the Sun

The PV Story

Your new LifeStyle SunSmart PV home will have photo voltaic panels, much like those used on the International Space Station, mounted on its roof. They will capture the power of the sun and convert it directly into electricity. When the sun is shining, your SunSmart PV home will produce more power than you need. The surplus will be automatically directed back to the utility company and credited against the power you buy when the sun isn't shining. Over a year's time, your net cost of electricity from the utility company will be Net Zero, or close to Net Zero, depending on a number of factors including your home's size and roof orientation.

Over a year's time, your net cost of electricity from the utility company will be Net Zero, or close to Net Zero, depending on a number of factors including your home's size and roof orientation.

Performance Certified

The anticipated performance of your particular LifeStyle SunSmartPV home will be discussed with you at time of purchase. When it is completed, your home will be individually tested and certified to deliver exactly the performance promised. You will receive a placard, like the one pictured here, to attach to your home as evidence it meets performance specifications. Notice, this actual home, at the address indicated, scored a negative 6 on the EnergySmart Home Scale. This means it delivers better than Net Zero performance, i.e., its owners might make a small net profit over a year's time selling surplus power to the utility.
